

Session-5

Question1: Create two tables in SQL: influencers (with influencer_id as PRIMARY KEY and name) and posts (with post_id as PRIMARY KEY, influencer_id as FOREIGN KEY, and caption). Insert at least 3 influencers and 2 posts for each influencer.

Ans:

```
create database influencer_db;

use influencer_db;

create table influencers (
    influencer_id INT PRIMARY KEY,
    name VARCHAR(100)
);

create table posts (
    post_id INT PRIMARY KEY,
    influencer_id INT,
    caption VARCHAR(255),
    FOREIGN KEY (influencer_id) REFERENCES influencers(influencer_id)
);

insert into influencers (influencer_id, name) VALUES
(1, 'Bhumi'),
(2, 'Jay'),
(3, 'Veer');

insert into posts (post_id, influencer_id, caption) VALUES
(101, 1, 'My first travel post'),
(102, 1, 'Beautiful sunset!'),
(103, 2, 'New coding tutorial'),(104, 2, 'Learning SQL today'),
(105, 3, 'Fitness motivation'),
```

(106, 3, 'Morning workout routine');

SELECT * FROM influencers;

The screenshot shows a 'Result Grid' with a 'Filter Rows' button. The table has two columns: 'influencer_id' and 'name'. The data rows are:

	influencer_id	name
▶	1	Bhumi
	2	Jay
	3	Veer
•	NULL	NULL

SELECT * FROM posts;

The screenshot shows a 'Result Grid' with a 'Filter Rows' button. The table has three columns: 'post_id', 'influencer_id', and 'caption'. The data rows are:

post_id	influencer_id	caption
101	1	My first travel post
102	1	Beautiful sunset!
103	2	New coding tutorial
104	2	Learning SQL today
105	3	Fitness motivation

Question2: Write an SQL query using INNER JOIN to display each post's caption along with the name of the influencer who posted it, based on the tables you created.

Ans:

SELECT posts.caption,influencers.name FROM posts

INNER JOIN influencers ON posts.influencer_id = influencers.influencer_id;

The screenshot shows a 'Result Grid' with a 'Filter Rows' button. The table has two columns: 'caption' and 'name'. The data rows are:

caption	name
My first travel post	Bhumi
Beautiful sunset!	Bhumi
New coding tutorial	Jay
Learning SQL today	Jay
Fitness motivation	Veer

Question3: Write an SQL query using LEFT JOIN to show all influencers and their posts, including influencers who haven't posted anything yet. If an influencer has no posts, display 'No Posts' in the caption column.

Hint: Use IFNULL or COALESCE to handle NULL values in the result.

Ans:

```
SELECT influencers.name, COALESCE(posts.caption, 'No Posts') AS caption FROM influencers
```

```
LEFT JOIN posts ON influencers.influencer_id = posts.influencer_id;
```

The screenshot shows a 'Result Grid' with a 'Filter Rows' button. The table has two columns: 'name' and 'caption'. The data is as follows:

	name	caption
▶	Bhumi	My first travel post
	Bhumi	Beautiful sunset!
	Jay	New coding tutorial
	Jay	Learning SQL today
	Veer	Fitness motivation

Question4: Write an SQL query using RIGHT JOIN to list all posts and the corresponding influencer's name, ensuring that even posts without a matching influencer_id (if any) are shown.

Ans:

```
SELECT posts.caption, COALESCE(influencers.name, 'Unknown Influencer') AS influencer_name FROM influencers
```

```
RIGHT JOIN posts ON influencers.influencer_id = posts.influencer_id;
```

The screenshot shows a 'Result Grid' with a 'Filter Rows' button. The table has two columns: 'caption' and 'influencer_name'. The data is as follows:

	caption	influencer_name
▶	My first travel post	Bhumi
	Beautiful sunset!	Bhumi
	New coding tutorial	Jay
	Learning SQL today	Jay
	Fitness motivation	Veer

Result 8 x
